Specify mode share and safety goals. Make sure that you have data collection processes in place to evaluate the performance, including safety performance, of corridors and networks for all modes of transportation.

Launch a bike share system that is open to the public. Bike sharing is a convenient, cost effective, and healthy way of encouraging locals and visitors to make short trips by bike and to bridge the "last mile" between public transit and destinations. Work with Brigham Young University to examine how a community-wide bike share system might complement their current bike share efforts or how it might integrate with their campus.

Increase the amount of staff time spent on improving conditions for people who bike and walk.

Work with local bicycle groups and interested parents to expand and improve the Safe Routes to School program to all schools. Providing bicycles in schools ensures that all students can learn to safely ride a bicycle regardless of the availability of a bicycle in their household.

Provo has some exciting projects ready to go, including some that help integrate bicycling and transit. Make sure that there is enough staff time and funding to ensure the success of these large projects without hampering the ability to pursue smaller changes through a robust Complete Streets program.
